EXPERIENCE

Project Co-ordinator / Web Developer – Glideology

Whilst carrying out my studies at the University of Worcester I worked as a part-time Business & Web developer for Glideology. The experience provided at Glideology gave me a valuable insight into the working world while working on my degree. Several years later I returned to Glideology as a Project Co-ordinator / Web Developer. The work involved at Glideology involved developing web applications using JS, PHP and similar technologies, developing online solutions for clients on a much more interactive level.

Web Developer – The Web Orchard

Once finishing my degree in 2018, I began working for The Web Orchard. With projects based around the WordPress CMS, The Web Orchard allowed me to develop my PHP, CSS, JS and HTML skills further and more rapidly than ever before.

Creating and managing Metrics Consultants' Website

During the summer of 2014 I was commissioned by Shropshire based surveying practice, Metrics Consultants, to create a new website, having done a module on this in my ICT course in Sixth Form and having learned some basic HTML from Codecademy I thought I was up to the task. This experience sparked my passion for web development.
